Fluxo de Mídias

- O que é ingest?

o processo de transferir os arquivos de câmera dos cartões originais para os destinos de backup, verificando a integridade dos dados.

- Cartões de câmera:

Codex Compact Drive, CFast 2.0 (ARRI Amira, C300 MkII), SxS Pro+ (Sony Venice, F55), RED MINI-MAG (RED DSMC2 - Monstro, Helium, GEMINI), expressP2 (Panasonic VARICAM LT/35), SD/microSD (câmeras B, GoPro, drones).

- Leitores de cartão e velocidade de transferência

leitores USB 3.2, Thunderbolt - impacto na velocidade de ingest; por que a velocidade de leitura do cartão é o gargalo, não o cabo.

- **Softwares de ingest**

OffShoot (antigo Hedge, padrão em cinema) , ShotPut Pro e Silverstack Lab ; a diferença de cada ferramenta.

- **O que é Checksum**

Uma "impressão digital" matemática do arquivo que detecta qualquer alteração em qualquer bit — MD5 vs. xxHash vs. SHA-256.

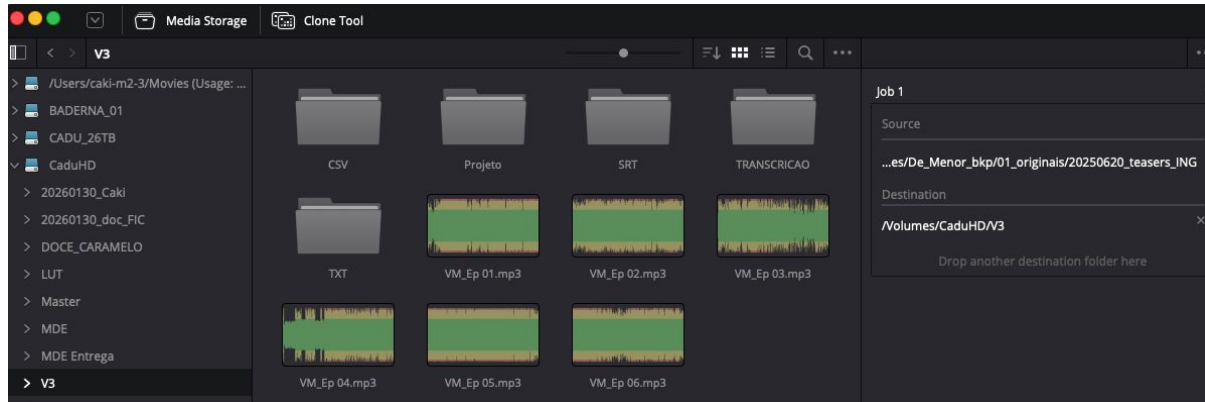

- **Checksum no fluxo**

Como o OffShoot verifica automaticamente para cada arquivo e a solução gratuita nativa no DaVinci Resolve (xxHash64 e MD5).

- Processo de ingest passo a passo

inserir cartão → nomear o ingest corretamente → selecionar destinos de backup → iniciar transferência. Aguardar resultado de checksum → confirmar checksum PASS em AMBOS os destinos → ejetar o cartão → registrar no media log.

- Por que nunca ejetar o cartão sem confirmar o checksum

o dado corrompido que a produção só descobre no editorial - e o logger que não tem como provar que o problema foi na câmera ou no ingest.

VERIFICAÇÃO DE METADADOS

The screenshot displays the DaVinci Resolve software interface. The main preview window shows a video clip of a hand holding a clapperboard. The clapperboard text includes "09.42.44.13", "#Boo1", "5.15.2", and "2". The interface is in Portuguese, with the top menu bar showing "Arquivo", "Metadados", "Inspeção", "Captura", and "Ferramentas". The "Metadados" panel on the right is active, showing the "Media Pool" tab. It displays two selected clips with the following metadata:

- 2 Clips selected: 00:00:33:14
- Audio: ADX 24 1080p 24.000 fps 1920 x 1080
- Linear PCM 48000 Hz 3 Ch

The "All Groups" section on the right shows a list of metadata fields, including "Rating", "Description", "Comments", "Keywords", "People", "Clip Color", "Shot", "Scene", "Take", "Angle", "Width", "Day / Night", "Environment", "Shot Type", "Flags", "Tag", "Shooting Day", "Date Recorded", "Camera #", "Roll Card #", "Reel Number", "Clip Number", "Program Name", "Episode #", "Episode Name", "Shot Shooting Tip", and "Location".

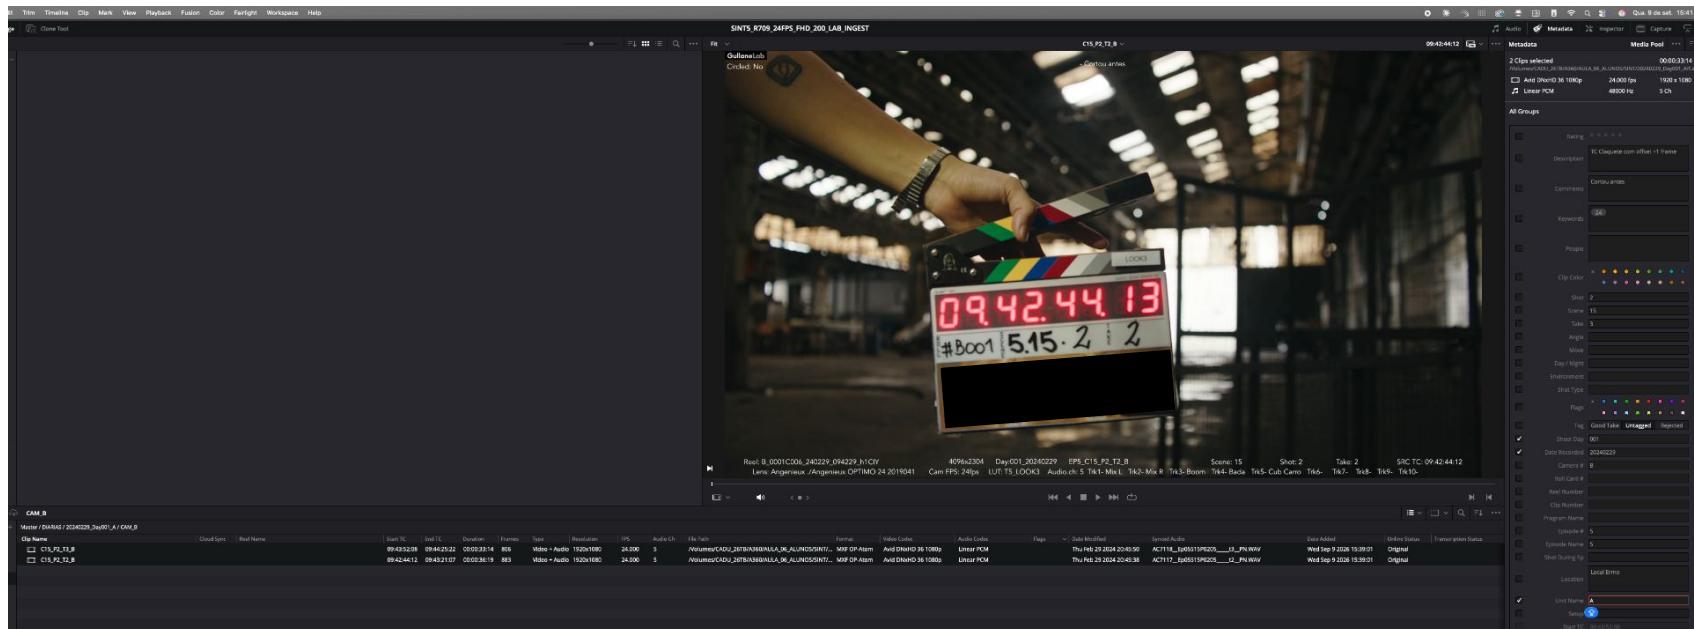

A small dialog box in the bottom left corner indicates that the metadata import was completed successfully. It states: "Metadata import completed successfully. 2 media pool clips updated. No match found for 84 entries in the source file." The dialog has an "OK" button.

The bottom of the interface shows a table of metadata for the selected clips:

Audio Codec	Flags	Take Modified	Synched Audio	Date Added	Online Status	Transfer Status
1080p	Linear PCM	Thu Feb 29 2024 20:40:50	AC7118_E00511P0205___L3_PN.WAV	Wed Sep 9 2026 15:59:01	Original
